

Advanced backup and recovery for small offices

Backup is essential for protecting business data from numerous threats, including hardware failures, outages and viruses. Carbonite Safe™ Backup plans offer small businesses powerful cloud and hybrid backup that's affordable and easy to use, with the flexibility to accommodate both simple and complex computer/server environments.

Simple pricing

Protect all the computers, external hard drives and physical or virtual servers across an entire business for one low price with no added capital expense (CAPEX).

Point-in-time recovery

Backup is an essential part of an effective anti-virus strategy. Revert to previously saved files after a ransomware attack without ever paying a ransom.

Security and compliance

128-bit encryption, private key option, transport layer security (TLS)—supports FERPA, GLBA and HIPAA compliance, including business associate agreement (BAA).

Award-winning support

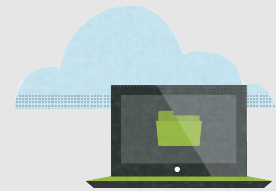

Get help installing, setting up or troubleshooting—via phone, online chat or email—from our dedicated business support team.

Efficiency

Advanced features like image backup, bare metal restore (BMR) and granular file or full system recovery options slash hours of time and complexity.

Free business trial

Try our full-featured business bundle for unlimited computers, external hard drives and physical or virtual servers.

Databases and live applications supported

- Microsoft Office 365 Exchange Online
- Microsoft SQL Server 2016, 2014, 2012, 2008, 2005 and 2000

Image backup and BMR for 64-bit hardware only.

Advanced backup and recovery for small offices

Carbonite Safe Backup plans for small businesses

Computer backup features and benefits include:

- Automatically back up unlimited computers, external hard drives and network attached storage devices.
- Access and share files remotely via web-based login or our free mobile app.
- Install software in minutes on one machine or many with remote deployment and management.
- Create custom policies and deploy remotely to individual machines, teams or departments.
- Manage and monitor backups remotely.
- Recover a single file or an entire folder system with one click.

Server backup features and benefits include:

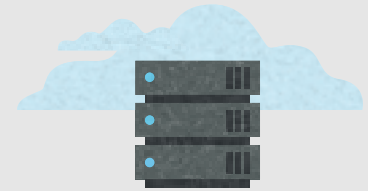

- Protect physical and virtual servers, including applications, databases and systems settings, with onsite and offsite hybrid backup.
- Choose local or cloud targets with separate retention policies for each.
- Protect an entire server in a single pass with image backup and bare metal restore (BMR).
- Recover files and folders or a complete system in minutes, even to dissimilar hardware.
- Protect and recover Hyper-V virtual machines.
- Configure full, incremental or differential backups from a user-friendly, web-based dashboard.
- Schedule backups around workflow and optimize bandwidth utilization to avoid bottlenecks.
